

# **Drinking Water Watch Bacteriological (Coliform) Sample Results**

Public Water Supply System Search Parameters

Water System No.

Water System Name

Activity Status

Principal County Served

Water System Type

Primary Source Water Type

Sample Search Parameters

Sample Class

\*Search will also use State Classification Code

State Classification Code

Sample Collection Date Range  To

\*\*The Sample Search defaults to the last 2 years unless you provide a specific date range.

Go to: <https://dww2.tceq.texas.gov/DWW/>

1. Enter your 7-digit public water system ID (PWS ID) in the **Water System No.** field or system name in the **Water System Name** field, do not enter both.

2. Click **Search for Water Systems**.

*Note:* You can also search for water systems by choosing items in **Activity Status** (active, inactive, proposed), **Principal County Served**, **Water System Type** (community, non-transient non-community, transient), and **Primary Source Water Type**.

**TCR Sample Results** are listed in chronological order, the newest results are on top.

In the first column, **Type/RP Loc.**, identifies the sample as routine (RT), repeat (RP), repeat original location (RP OR), or repeat downstream (RP DN). The routine and repeat information is also reflected in the sixth column **Sample Pt. Description**.

**Sample No.** is the sample ID number assigned by the laboratory; this number is in black. The red numbers below the black ID number will show up in a repeat sample. The red ID numbers are the original sample ID and date the original sample was collected. This shows the connection between the original sample and the repeat samples.

Results are listed in the last column **Result/Analyte/Method/MP**. Negative (coliform was not found) results will show up in black and have an uppercase A that stands for absent. Positive results show up in red for either positive coliform (coliform found), positive E. coli (E. coli found), or both were positive.

The location as listed on the chain of custody will also appear in the last column

**Result/Analyte/Method/MP.**

Raw (sample collected at the well before disinfection) coliform sample results will include the TCEQ well ID in the **Facility** column and will be labeled as well tap in the **Sample Pt Description** column.

In the fifth column **Sample Pt.** the sample will be labeled as ASM (assessment source monitoring) or TSM (triggered source monitoring). Assessment source monitoring requires raw groundwater source monitoring based on the groundwater's susceptibility to fecal contaminants; this monitoring is generally required every month and may be required for a specific amount of time or for an indefinite period of time. Triggered source monitoring is required for systems that do not provide at least 4-log treatment of viruses; a raw sample(s) is required when a routine distribution coliform sample is positive.

# Questions

If you have questions or would like more information about bacteriological samples or the Revised Total Coliform Rule please call 512-239-4691 or email [TCRData@tceq.texas.gov](mailto:TCRData@tceq.texas.gov).
